Enhancement Field offices

Attached is a general bird species list  
for Region 4 recently compiled by  
the migratory Bird Mgmt office. Even  
though general it may be useful.

Bob Bartels

Subject: Regional Bird List

Attached you will find a customized report on the status of birds known to occur in Region 4 (exclusive of the Puerto Rico and the U.S. Virgin Islands. A separate list is attached for Puerto Rico and the U.S. Virgin Islands.

Descriptions of the fields (or columns), and of the information contained therein, follows:

NAME is the English (or common) name, in accordance with the A.O.U. Check-list.

R4, and PR are FWS Region 4, and Puerto Rico and the U.S. Virgin Islands, where

p = permanent resident

s = summer resident (primarily, although species may occur in smaller numbers at other seasons)

w = winter resident (primarily, although species may occur in smaller numbers at other seasons)

r = rare at any season (recorded on <10% of days afield, or range restricted to area <10% of region)

t = transient (regular migrant)

v = vagrant (outside established range)

x = extremely rare (accidental)

e = extirpated (no records in past 50 years)

E = extinct

CUS is the Continental United States, where status codes are the same as those defined above.

M is the Migratory Bird Treaty Act (MBTA), where T designates those species protected by the MBTA.

E is E is the Endangered Species Act (ESA), where T designates those species protected by the ESA throughout all or part of their U.S. range as Endangered or Threatened species.

H is Hunted, where T designates those species for which annual hunting regulations are established.

G is Game Bird, where T designates those species considered to be resident game birds (i.e. members of the order Galliformes).

I is Introduced, where T designates those species that are introduced into the U.S. (i.e. non-native).

B is Breeds, where T designates those species that breed regularly in the U.S.

BBS is Breeding Bird Survey, where T designates those species for which BBS data is believed to be suitable for monitoring population trends at the national level (i.e. recorded on minimum of 50 routes).

CBC is Christmas Bird Count, where T designates those species for which CBC data is believed to be suitable for monitoring population trends at the national level (i.e. recorded at minimum of 50 sites).
